

# Test: Frontend

The test's goal is to clearly and reliably show and populate data. Provide error messages, make sure the user can not do wrong and create a good user experience.

The data is displayed by creating a list of items in which the user can add and change items.

For each object a text, a date, a status, and ownership is printed.

You have access to a simple API with objects and users that both have a matching User ID.

Instead of the User ID, the corresponding User Name is displayed in the list of items.

- See the attached API “**softrobot\_test\_api**” for further instructions.

Example list				
Text	Date	Owner	Status	
Lorem ipsum	2017-05-24	Name		
Dolor sit amet	2017-01-20	Name		
				

- A file is provided with an API to retrieve list objects and users. There is a built-in risk that requests will be lost.
- Chosen method of getting the test done does not matter. The only requirement is to make it with React.js.
- Determine how much time you want to put on looks vs. functionality. “Bonus points” are given for good user experience and / or further functionality.
